REMARKS

Applicant hereby cancels pending claims 1-25 and adds new claims 26-33 set forth below.

None of the cited prior art references, including Biffar and Srinivisan, disclose or suggest application rules for dynamically selecting content objects wherein at least one of the rules has a parameter than can be resolved only dynamically at runtime. This aspect of resolving rule parameters dynamically, in conjunction with the dynamic selection of content objects and rendering of content pages, significantly enhances the application author's ability to render content adaptively. Prior dynamic rendering systems included no such features, or suggestions of such features, and were far more restrictive in nature.
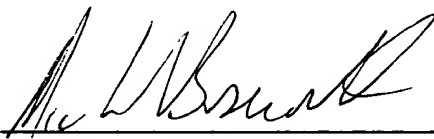

The claims as amended now clearly set forth the present invention.

Applicant submits that the application is now in condition for allowance.

Respectfully submitted,

BURNS, DOANE, SWECKER & MATHIS, L.L.P.
